EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Todd Guise on 2/26/2010.

The application has been amended as follows:

Claims 2, 3, 8, and 11 are canceled.

Claim 1 has been amended to include the recitation of Claims 2 and 3 as follows:

Claim 1 after line 18 add --the first air conditioning monitoring and control device communicate with the air conditioner using a first communication protocol;

the second air conditioning monitoring and control device further includes a communication protocol conversion unit capable of converting between the first communication protocol and a second communication protocol;

the first monitoring panel is configured to communicate with the first air conditioning monitoring and control device using the first communication protocol, and

the second monitoring panel is configured to communicate with the second air conditioning monitoring and control device using the second communication protocol;--

2. The following is an examiner's statement of reasons for allowance:

Claim 1 recites "a first monitoring panel built into or connected via a first communication line to the first air conditioning monitoring and control device to monitor the air conditioner; and a second monitoring panel built into or connected via a second communication line to the second air conditioning monitoring and control device to monitor the air conditioner, the second communication line being separate from the first communication line and separately connecting to the second air conditioning monitoring and control device" which is not found in the prior art. In addition, the recitation of having two different communication protocols for the two different monitoring panels communicating with the monitoring and control devices further defines the invention over a 103(a) obviousness rejection that a monitoring panel can be added anywhere to a preexisting system since the limitation is now sufficiently narrow to overcome such an obviousness statement.

Jensen et al (US6389331) teaches an air conditioning monitoring and control system for a building that has two panels that communicate with various controls of the building. Jensen et al however fails to show two separate communication lines connecting the two monitoring panels to the two separate monitoring and control devices. Jensen et al shows a common network that connects the monitoring panels together. Thus Jensen et al fails to recite all of the limitations of Claim 1.

Yoon et al (US2004/0117069) teaches multiple protocol controllers that can convert from one protocol to another. Yoon et al fails to teach though multiple monitoring panels and thus fails to teach separate communication lines for two monitoring panels. Therefore, no obvious

combination of the prior art shows a motivation for separate communication lines, thus rendering the claim novel and non-obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to TRAVIS RUBY whose telephone number is (571)270-5760. The examiner can normally be reached on Monday-Friday 9:30-6:00.
